You will notice that this Annual Ring covers the two-year period 1980-81. The students are reviewing alternatives in schedule of publication in order to fit it more appropriately with their other academic activities. Many things can happen in a two-year period, I would like to review some of the activities that affected the School.

We have had a major set-back in the new Forestry-Wildlife-Fisheries Building. The Capital Outlay Bill presented to the 1980 Legislature by Governor Treen included funding for construction of the building. During the special session of the 1980 Legislature the House approved the Bill as presented by the Governor; however, the Senate deleted the $7.3 million for construction of the facility in order to secure funds for special projects of Senators which were later vetoed by the Governor. We developed a new request for construction funds in the amount of $9 million but the Governor did not include our building in the funded section of his Bill submitted to the 1981 Legislature. School alumni and individuals with forestry, wildlife and fisheries interest through many contacts with the Governor’s office have expressed their concern that the Administration should change its position and fund the project since plans are completed and the site prepared. As of this writing, actions of the Governor with respect to funding of the new building during 1981 are uncertain.

The sudden death of Dr. Glasgow on August 3, 1980 came as a shock to all of us. He retired on July 1, 1980 and at his retirement announced that he would remain active in wildlife matters through part-time employment with Williams, Inc. and activities of the Louisiana Wildlife Federation. Dr. Glasgow had received a multitude of awards for distinguished service. Although implied, the recognition did not really convey the tremendous amount of respect that people, especially students, had for him. He had gained this respect for his years of dedicated performance to the broad field of education embodying all aspects of natural resources conservation.

Faculty changes within the past two years have been as follows: Dr. Perry transferred to Washington, D.C. office of U.S. Fish and Wildlife Service in December 1979. Mr. Marlin retired on July 1, 1980. Mr. Newsom retired on January 9, 1981 and accepted a position as Assistant Secretary, Louisiana Department of Wildlife and Fisheries. New faculty include: Dr. Jackson, industrial forestry and timber harvesting, employed December 1979; Dr. Romaine, crawfish research, employed January 1980; Dr. Hotvedt, forest economics and forest management, employed July 1980; Dr. Johnson, forest range and wildlife management, employed August 1980; and Dr. Zwank, Assistant Leader, Wildlife Cooperative Research Unit, employed October 1980. We are currently seeking an individual to fill the vacant position in forest biometrics-management due to the resignation of Dr. Stiff in December 1980.

The Board of Regents review of undergraduate forestry education in Louisiana was completed in November 1979. Action by the Board continued the professional programs at LSU and Louisiana Tech. established a 2-year technical program at McNeese, and assigned LSU the responsibility of coordinating programs in forestry in Louisiana at all academic levels.

Our proposal for the establishment of a doctoral program in wildlife and fisheries science was reviewed by Board of Regents’ consultants during May 1980. Following a public hearing held by the Board in October 1980 and our responses to the consultants’ review and public hearing the Board approved our offering the Ph.D. in Wildlife and Fisheries Science effective fall semester 1981.

Energy saver.

This seedling will become a giant using only the sun's energy. When the tree has matured, harvesting it and turning it into plywood and lumber will take a fraction of the energy needed to manufacture other building materials. And, in a home, the wood will save even more energy because it insulates six times better than brick, 15 times better than concrete, and 1,770 times better than aluminum. In a test comparing wood-frame and masonry homes of the same size, the wood-frame home used 23% less heat energy, and 16% less energy for air conditioning. At Georgia-Pacific, we manage forests with all kinds of trees. And we've known for a long time that wood saves energy. Now, in this critical time, we'd like everyone to know.

NEW TREE MARKING INK

This new ink is not a paint and was specially formulated by the Forestry Products Division of ACMI, coding and marking ink specialists, for effective tree marking. The new ACMI ink is brighter in color for greater visibility, non-settling for easier and faster application, better penetration, longer lasting, better economics, available in three grades—super long life, regular and temporary. Also try new Trecoder boundary marking inks. Two types—sprayable and brushable. The colors are bright and long-lasting. Apply Trecoder sprayable boundary ink and Trecoder tree-marking inks with one of our new Trecoder spot guns.

Write or call for data and samples.

One of the great landmarks in the history of man was the discovery of fire—to warm our homes, cook our food and help make the products of a society. Likely as not, that first fire was fueled with wood.

For centuries, wood was a major fuel source—abundant, readily available, renewable. With the coming of the industrial revolution, however, other energy sources came to the fore—water power, oil, coal, gas and even nuclear energy. Wood as a fuel source was all but forgotten.

Recent events have changed all that. As supplies of oil and gas begin a steady decline, the nation and the world seek alternate energy sources. Researchers are looking into solar heating, windmills, coal gasification, shale oil and a host of others.

Here in the Deep South, Crown Zellerbach is already developing alternate fuel sources as near as our own managed forests. Yes, energy indeed grows on trees:

For years, a substantial portion of steam generated at our pulp mills has come from burning dissolved wood components in our chemical recycling process. Additionally, bark removed from pulpwood has been burned for fuel.

Now our forest products manufacturing complex at Joyce, La., is using wood waste—bark, sawdust and shavings—for virtually all of its energy needs except electricity.

And at our Bogalusa, La. pulp and paper mill we are investing more than $20 million in a wood-fired boiler that will replace five units now burning natural gas.

Fuel wood for this mammoth furnace will be collected from our forest lands following normal logging operations—tops, limbs, broken or defective stems.

We'll all benefit from this improved utilization of the forest resource. Our mills will burn less gas and oil, thereby conserving these fuels for other uses. Our forest lands will be better prepared to grow a new tree crop after harvest. And since trees are renewable—we can grow more energy, year after year after year.

“If You Bank With Us —
You Can Bank on Us!”
SOCIETY OF AMERICAN FORESTERS

Dr. Perry's going away party.

Yes, I'm still here!
What was this?

A new dish — squished fly.

The entertainment
Ah, Another fall smoker.

Dr. Hansborough makes introductions.

Warren and Tom get down!

Cathy and Lloyd show how it's done.

It wasn't that funny Steve.
Dr. Avault was official tester.

That was some good stuff.

Looks like fun to me.

They’re better without ketchup!!

The traditional pyramid.

Lloyd, Barbara, Cathy and Dale exchange vows.
Decisions, Decisions . . .

Sue sells the best!

I only got a dollar.

CHRISTMAS TREES . . .

Decisions, Decisions . . .

Satisfaction guaranteed?

Get 'em while they're hot!

Jeff and Steve steal a kiss
AND SANTA

Have Donna and Sue been good this year?

A good choice my boy.
If they don't like it, they can . . .

Lee gives it his best?

What is it anyway?

GO TIGERS FIGHT

Dr. Shilling gives a helping hand.

Cathy's training for a higher position.
Hi Mom!

You can't force me to smile.

Gary goes for a Bud and a smile.

Dr. Rouse Caffey

Dr. Chambers and Rudy stretch after a meal.

Dr. Tipton
Steve, Tom, Dale, Lee, and Diane develop a new method of debarking.
Harvesting

Maybe He'll get it right this time.

Dr. Jackson shows 'em how.

A hard day's work...

...Deserves a good rest.
CAMP FUN

Just hanging around!

Camp is... a day behind bars.

You think the chiggers can find us here?

Breakdown #999...

CAMP WORK

How long did it take Tom to come down?
It tastes too bad to leave in my mouth.

Ain't I cool?
The devil made me do it.

You said I had to do what?

Raise your left hand and repeat after me...

Buddy and Dale demonstrate proper technique.

Fire, a senior course, teaches fire suppression, prevention, and prescribed burns. Who can ever forget fire line buildings and last minute preparations of fire reports. Smokey would have been proud.
The name **Timberjack**

was first applied to a remarkable new 4-wheel drive articulated log skidder in 1961. Since then, it has replaced horse, mule, ox and elephant over 20,000 times in 72 countries.

Because it's an Eaton Forestry Equipment Division trademark, you won't find Timberjack in the dictionary. But it means a lot to people in the logging industry.
Today, the printed word is more important than ever. We need to read better, write better, and communicate better.

International Paper is publishing a new series of advertisements in the hope that we can help. Even if it's in a small way.

If you have any ideas for this series, or if you'd like reprints of the titles shown here, please write to:

Some forestry basics cannot be bought.

The basics you’ll use in your forestry career cannot be bought. They were given to you: your hands, your eyes, your mind.

You develop these basics through education and experience. And you supplement them with man-made tools.

That’s where Forestry Suppliers, Inc. fits in. The tools we sell make it easier for you to develop the basics you were given.

Team up your basics with our tools for your success.
