Louisiana farmers received much greater cash income from farm marketings after 1940 than before that year but prices paid by farmers rose also thereby taking some of their income gains away from them.

Agricultural Statistics for Louisiana
1909-1953

BY J. P. MONTGOMERY

DEPARTMENT OF AGRICULTURAL ECONOMICS
AGRICULTURAL EXPERIMENT STATION

The major purpose of this publication is to provide agricultural data on Louisiana agriculture for farmers, educators, agricultural workers, and commercial, industrial, and financial institutions. These data should be of value in analyzing past agricultural experiences and in planning future operations.

The compilations were made from releases by the Louisiana Crop Reporting Service and other releases by the United States Department of Agriculture. The Crop Reporting Office in Louisiana represents both the United States Department of Agriculture and Louisiana State University. Formal cooperation exists between the Department of Agricultural Economics of the University and the Louisiana Office of Agricultural Estimates, Agricultural Marketing Service, United States Department of Agriculture. The tables are compiled from established series which are released regularly by the Louisiana Cooperative Crop Reporting Service or by the Department of Agriculture in Washington and therefore can be kept up to date.

This bulletin makes the data on Louisiana agriculture more readily available to agricultural workers and others affected by changes in agricultural conditions. The publication comprises statistics on the more important agricultural enterprises and commodities for Louisiana from 1909 through 1953. The tables show the data in five-year averages from 1909 through 1943 and on an annual basis thereafter. The five-year averages are used through 1943 because Louisiana Bulletin No. 444 provides annual data prior to that date. A considerable number of revisions have been made in the data shown in Louisiana Bulletin No. 444, Agricultural Statistics for Louisiana, 1909-1949, since that bulletin was published. The revised estimates are shown in this publication.

These data include production, disposition, price, and value of various livestock and livestock products in Louisiana, as well as acreage, yield, production, price, and value of the more important crops produced in the state from 1909 through 1953. Attempts have been made to organize the data in such tables that they will be of the greatest value to those in need of information on Louisiana's agriculture in time series.
The data in this publication are the latest official statistics of the United States Department of Agriculture with the exception of those in Tables 1 and 2, which are taken from releases by the Bureau of the Census, United States Department of Commerce.

The "cash receipts" data shown in the tables represent the monetary returns from farm marketings during the calendar year. The "value of production" information, however, represents the total farm value of the commodity produced during the crop year whether sold, consumed on the farm, or wasted. The average sale price of that sold applies also to the portion of the crop unsold in computing total farm value. Cash receipts are shown on a calendar-year basis, while value of production is shown on a crop-year basis. In a few tables, the data shown represent the value of sales. These represent the portion of the commodity sold during the crop year, excluding any unsold portions whether due to farm consumption or to economic abandonment.
